

ANDROID STATIC ANALYSIS REPORT

 Bluezone (3.5.8)

File Name:

Bluezone_Contact_detection_v3.5.8.apk

| | |
|---------------------|--------------------------|
| Package Name: | com.mic.bluezone |
| Average CVSS Score: | 6.6 |
| App Security Score: | 30/100 (HIGH RISK) |
| Trackers Detection: | 2/407 |
| Scan Date: | Oct. 20, 2021, 8:38 p.m. |

FILE INFORMATION

File Name: Bluezone_Contact_detection_v3.5.8.apk

Size: 53.95MB

MD5: 90aff73b4587213b9afbc9f271ce1dfc

SHA1: 1f83ebe09c3f34fc8710cc69ad812d1efa761b53

SHA256: 4a239e9b0f2245d80b3640d0636fee7887823b3c2dc0a37b6f9e30ee06a5c97d

APP INFORMATION

App Name: Bluezone
Package Name: com.mic.bluezone
Main Activity: com.bluezone.MainActivity
Target SDK: 29
Min SDK: 22
Max SDK:
Android Version Name: 3.5.8
Android Version Code: 255

APP COMPONENTS

Activities: 4
Services: 17
Receivers: 11
Providers: 6
Exported Activities: 0
Exported Services: 3
Exported Receivers: 4
Exported Providers: 0

CERTIFICATE INFORMATION

APK is signed
v1 signature: True
v2 signature: True
v3 signature: True
Found 1 unique certificates

| STATUS | DESCRIPTION |
|---------|---|
| secure | Application is signed with a code signing certificate |
| warning | Application is signed with v1 signature scheme, making it vulnerable to Janus vulnerability on Android <7.0 |

APPLICATION PERMISSIONS

| PERMISSION | STATUS | INFO | DESCRIPTION |
|---|--------|------------------------------|---|
| android.permission.BLUETOOTH | normal | create Bluetooth connections | Allows applications to connect to paired bluetooth devices. |
| android.permission.BLUETOOTH_ADMIN | normal | bluetooth administration | Allows applications to discover and pair bluetooth devices. |
| android.permission.RECEIVE_BOOT_COMPLETED | normal | automatically start at boot | Allows an application to start itself as soon as the system has finished booting. This can make it take longer to start the phone and allow the application to slow down the overall phone by always running. |
| android.permission.FOREGROUND_SERVICE | normal | | Allows a regular application to use Service.startForeground. |
| android.permission.REQUEST_IGNORE_BATTERY_OPTIMIZATIONS | normal | | Permission an application must hold in order to use Settings.ACTION_REQUEST_IGNORE_BATTERY_OPTIMIZATIONS. |
| android.permission.INTERNET | normal | full Internet access | Allows an application to create network sockets. |
| android.permission.ACCESS_NETWORK_STATE | normal | view network status | Allows an application to view the status of all networks. |

| PERMISSION | STATUS | INFO | DESCRIPTION |
|---|-----------|--|---|
| android.permission.ACCESS_FINE_LOCATION | dangerous | fine (GPS) location | Access fine location sources, such as the Global Positioning System on the phone, where available. Malicious applications can use this to determine where you are and may consume additional battery power. |
| android.permission.ACCESS_BACKGROUND_LOCATION | dangerous | access location in background | Allows an app to access location in the background. |
| android.permission.VIBRATE | normal | control vibrator | Allows the application to control the vibrator. |
| android.permission.REQUEST_INSTALL_PACKAGES | dangerous | Allows an application to request installing packages. | Malicious applications can use this to try and trick users into installing additional malicious packages. |
| android.permission.CAMERA | dangerous | take pictures and videos | Allows application to take pictures and videos with the camera. This allows the application to collect images that the camera is seeing at any time. |
| android.permission.WAKE_LOCK | normal | prevent phone from sleeping | Allows an application to prevent the phone from going to sleep. |
| android.permission.MANAGE_EXTERNAL_STORAGE | dangerous | Allows an application a broad access to external storage in scoped storage | Allows an application a broad access to external storage in scoped storage. Intended to be used by few apps that need to manage files on behalf of the users. |
| android.permission.READ_EXTERNAL_STORAGE | dangerous | read external storage contents | Allows an application to read from external storage. |
| android.permission.WRITE_EXTERNAL_STORAGE | dangerous | read/modify/delete external storage contents | Allows an application to write to external storage. |
| com.mic.bluezone.permission.C2D_MESSAGE | unknown | Unknown permission | Unknown permission from android reference |

| PERMISSION | STATUS | INFO | DESCRIPTION |
|------------|--------|------|-------------|
|------------|--------|------|-------------|

| | | | |
|--|-----------|---------------------------------|---|
| android.permission.ACCESS_WIFI_STATE | normal | view Wi-Fi status | Allows an application to view the information about the status of Wi-Fi. |
| android.permission.ACCESS_COARSE_LOCATION | dangerous | coarse (network-based) location | Access coarse location sources, such as the mobile network database, to determine an approximate phone location, where available. Malicious applications can use this to determine approximately where you are. |
| com.android.vending.CHECK_LICENSE | unknown | Unknown permission | Unknown permission from android reference |
| com.google.android.c2dm.permission.RECEIVE | signature | C2DM permissions | Permission for cloud to device messaging. |
| com.sec.android.provider.badge.permission.READ | normal | Show notification count on app | Show notification count or badge on application launch icon for samsung phones. |
| com.sec.android.provider.badge.permission.WRITE | normal | Show notification count on app | Show notification count or badge on application launch icon for samsung phones. |
| com.htc.launcher.permission.READ_SETTINGS | normal | Show notification count on app | Show notification count or badge on application launch icon for htc phones. |
| com.htc.launcher.permission.UPDATE_SHORTCUT | normal | Show notification count on app | Show notification count or badge on application launch icon for htc phones. |
| com.sonyericsson.home.permission.BROADCAST_BADGE | normal | Show notification count on app | Show notification count or badge on application launch icon for sony phones. |
| com.sonymobile.home.permission.PROVIDER_INSERT_BADGE | normal | Show notification count on app | Show notification count or badge on application launch icon for sony phones. |
| com.anddoes.launcher.permission.UPDATE_COUNT | normal | Show notification count on app | Show notification count or badge on application launch icon for apex. |

| PERMISSION | STATUS | INFO | DESCRIPTION |
|--|---------|--------------------------------|--|
| com.majeur.launcher.permission.UPDATE_BADGE | normal | Show notification count on app | Show notification count or badge on application launch icon for solid. |
| com.huawei.android.launcher.permission.CHANGE_BADGE | normal | Show notification count on app | Show notification count or badge on application launch icon for huawei phones. |
| com.huawei.android.launcher.permission.READ_SETTINGS | normal | Show notification count on app | Show notification count or badge on application launch icon for huawei phones. |
| com.huawei.android.launcher.permission.WRITE_SETTINGS | normal | Show notification count on app | Show notification count or badge on application launch icon for huawei phones. |
| android.permission.READ_APP_BADGE | normal | show app notification | Allows an application to show app icon badges. |
| com.oppo.launcher.permission.READ_SETTINGS | normal | Show notification count on app | Show notification count or badge on application launch icon for oppo phones. |
| com.oppo.launcher.permission.WRITE_SETTINGS | normal | Show notification count on app | Show notification count or badge on application launch icon for oppo phones. |
| me.everything.badger.permission.BADGE_COUNT_READ | unknown | Unknown permission | Unknown permission from android reference |
| me.everything.badger.permission.BADGE_COUNT_WRITE | unknown | Unknown permission | Unknown permission from android reference |
| com.google.android.finsky.permission.BIND_GET_INSTALL_REFERRER_SERVICE | unknown | Unknown permission | Unknown permission from android reference |

NETWORK SECURITY

| NO | SCOPE | SEVERITY | DESCRIPTION |
|----|-------|----------|-------------|
|----|-------|----------|-------------|

MANIFEST ANALYSIS

| NO | ISSUE | SEVERITY | DESCRIPTION |
|----|--|----------|--|
| 1 | Clear text traffic is Enabled For App [android:usesCleartextTraffic=true] | high | The app intends to use cleartext network traffic, such as cleartext HTTP, FTP stacks, DownloadManager, and MediaPlayer. The default value for apps that target API level 27 or lower is "true". Apps that target API level 28 or higher default to "false". The key reason for avoiding cleartext traffic is the lack of confidentiality, authenticity, and protections against tampering; a network attacker can eavesdrop on transmitted data and also modify it without being detected. |
| 2 | Broadcast Receiver (com.dieam.reactnativepushnotification.modules.RNPushNotificationBootEventReceiver) is not Protected. An intent-filter exists. | high | A Broadcast Receiver is found to be shared with other apps on the device therefore leaving it accessible to any other application on the device. The presence of intent-filter indicates that the Broadcast Receiver is explicitly exported. |
| 3 | Service (io.invertase.firebase.messaging.RNFirebaseMessagingService) is not Protected. An intent-filter exists. | high | A Service is found to be shared with other apps on the device therefore leaving it accessible to any other application on the device. The presence of intent-filter indicates that the Service is explicitly exported. |

| NO | ISSUE | SEVERITY | DESCRIPTION |
|----|---|----------|--|
| 4 | Broadcast Receiver (io.invertase.firebase.notifications.RNFirestoreNotificationsRebootReceiver) is not Protected. [android:exported=true] | high | A Broadcast Receiver is found to be shared with other apps on the device therefore leaving it accessible to any other application on the device. |
| 5 | Service (com.scan.TraceCovidNotificationListener) is Protected by a permission, but the protection level of the permission should be checked. Permission: android.permission.BIND_NOTIFICATION_LISTENER_SERVICE [android:exported=true] | high | A Service is found to be shared with other apps on the device therefore leaving it accessible to any other application on the device. It is protected by a permission which is not defined in the analysed application. As a result, the protection level of the permission should be checked where it is defined. If it is set to normal or dangerous, a malicious application can request and obtain the permission and interact with the component. If it is set to signature, only applications signed with the same certificate can obtain the permission. |
| 6 | Service (com.scan.ServiceTraceCovid) is not Protected. [android:exported=true] | high | A Service is found to be shared with other apps on the device therefore leaving it accessible to any other application on the device. |
| 7 | Broadcast Receiver (com.bluezone.BootStartReceiver) is not Protected. An intent-filter exists. | high | A Broadcast Receiver is found to be shared with other apps on the device therefore leaving it accessible to any other application on the device. The presence of intent-filter indicates that the Broadcast Receiver is explicitly exported. |
| 8 | Broadcast Receiver (com.google.firebase.iid.FirebaseInstanceIdReceiver) is Protected by a permission, but the protection level of the permission should be checked. Permission: com.google.android.c2dm.permission.SEND [android:exported=true] | high | A Broadcast Receiver is found to be shared with other apps on the device therefore leaving it accessible to any other application on the device. It is protected by a permission which is not defined in the analysed application. As a result, the protection level of the permission should be checked where it is defined. If it is set to normal or dangerous, a malicious application can request and obtain the permission and interact with the component. If it is set to signature, only applications signed with the same certificate can obtain the permission. |

NIAP ANALYSIS v1.3

| NO | IDENTIFIER | REQUIREMENT | FEATURE | DESCRIPTION |
|----|---------------------------------|----------------------------------|---------------------------------------|---|
| 1 | FCS_RBG_EXT.1.1 | Security Functional Requirements | Random Bit Generation Services | The application invoke platform-provided DRBG functionality for its cryptographic operations. |
| 2 | FCS_STO_EXT.1.1 | Security Functional Requirements | Storage of Credentials | The application does not store any credentials to non-volatile memory. |
| 3 | FCS_CKM_EXT.1.1 | Security Functional Requirements | Cryptographic Key Generation Services | The application generate no asymmetric cryptographic keys. |

| NO | IDENTIFIER | REQUIREMENT | FEATURE | DESCRIPTION |
|----|---------------------------------|--|--|---|
| 4 | FDP_DEC_EXT.1.1 | Security Functional Requirements | Access to Platform Resources | The application has access to ['bluetooth', 'location', 'network connectivity', 'camera']. |
| 5 | FDP_DEC_EXT.1.2 | Security Functional Requirements | Access to Platform Resources | The application has access to no sensitive information repositories. |
| 6 | FDP_NET_EXT.1.1 | Security Functional Requirements | Network Communications | The application has user/application initiated network communications. |
| 7 | FDP_DAR_EXT.1.1 | Security Functional Requirements | Encryption Of Sensitive Application Data | The application implement functionality to encrypt sensitive data in non-volatile memory. |
| 8 | FMT_MEC_EXT.1.1 | Security Functional Requirements | Supported Configuration Mechanism | The application invoke the mechanisms recommended by the platform vendor for storing and setting configuration options. |
| 9 | FTP_DIT_EXT.1.1 | Security Functional Requirements | Protection of Data in Transit | The application does encrypt some transmitted data with HTTPS/TLS/SSH between itself and another trusted IT product. |
| 10 | FCS_RBG_EXT.2.1,FCS_RBG_EXT.2.2 | Selection-Based Security Functional Requirements | Random Bit Generation from Application | The application perform all deterministic random bit generation (DRBG) services in accordance with NIST Special Publication 800-90A using Hash_DRBG. The deterministic RBG is seeded by an entropy source that accumulates entropy from a platform-based DRBG and a software-based noise source, with a minimum of 256 bits of entropy at least equal to the greatest security strength (according to NIST SP 800-57) of the keys and hashes that it will generate. |
| 11 | FCS_COP.1.1(2) | Selection-Based Security Functional Requirements | Cryptographic Operation - Hashing | The application perform cryptographic hashing services not in accordance with FCS_COP.1.1(2) and uses the cryptographic algorithm RC2/RC4/MD4/MD5. |

| NO | IDENTIFIER | REQUIREMENT | FEATURE | DESCRIPTION |
|----|-----------------------------------|--|---|---|
| 12 | FCS_COP.1.1(4) | Selection-Based Security Functional Requirements | Cryptographic Operation - Keyed-Hash Message Authentication | The application perform keyed-hash message authentication with cryptographic algorithm ['HMAC-SHA-256'] . |
| 13 | FCS_HTTPS_EXT.1.1 | Selection-Based Security Functional Requirements | HTTPS Protocol | The application implement the HTTPS protocol that complies with RFC 2818. |
| 14 | FCS_HTTPS_EXT.1.2 | Selection-Based Security Functional Requirements | HTTPS Protocol | The application implement HTTPS using TLS. |
| 15 | FCS_HTTPS_EXT.1.3 | Selection-Based Security Functional Requirements | HTTPS Protocol | The application notify the user and not establish the connection or request application authorization to establish the connection if the peer certificate is deemed invalid. |
| 16 | FIA_X509_EXT.1.1 | Selection-Based Security Functional Requirements | X.509 Certificate Validation | The application invoked platform-provided functionality to validate certificates in accordance with the following rules: ['The certificate path must terminate with a trusted CA certificate']. |
| 17 | FIA_X509_EXT.2.1 | Selection-Based Security Functional Requirements | X.509 Certificate Authentication | The application use X.509v3 certificates as defined by RFC 5280 to support authentication for HTTPS , TLS. |
| 18 | FPT_TUD_EXT.2.1 | Selection-Based Security Functional Requirements | Integrity for Installation and Update | The application shall be distributed using the format of the platform-supported package manager. |

Release Date: Apr 16, 2020 **Privacy Policy:** [Privacy link](#)

Description:

PC-Covid is the National COVID-19 prevention and control application of Viet Nam. Details of the app are available at: www.pccovid.gov.vn. Agencies in charge: Viet Nam's Ministry of Health, Ministry of Public Security, Ministry of Information and Communications Operating unit: The National Technology Center for COVID-19 Prevention and Control Enterprises sponsoring the development: BKAV, Viettel, VNPT. PC-Covid is applicable to people who are living and traveling in Vietnam. Main features: Personal and venue QR code issuance and management; QR scanner; Medical declaration; Domestic move declaration; Citizens' reports; Vaccination information; Test information; Covid-19 card; Close contact tracing; Move density; Infection trends; Risk map, and so on. Personal QR code: Each citizen is granted a unique personal QR code that enables the display of information related to COVID-19 prevention and control following national pandemic prevention and control strategy. Medical declaration: Upon symptoms such as cough, fever, loss of taste, etc. or upon relation/contact with a suspected case of COVID-19, citizens need to proactively make medical declaration to get support and early detection of infection risks. Venue QR code: Locations like offices, supermarkets, schools, hospitals, public places, etc. register for venue QR codes and must ensure full recording of citizens entering/leaving the places by QR code scanning. Vaccination, test result: Citizens can view the detailed information of the number of vaccine doses they have got as well as the time of the latest dose. PC-Covid also displays COVID-19 test results when they become available. COVID-19 Card: The app connects to COVID-19 testing and vaccination management systems, thereby displaying information about vaccination and testing for citizens in relevant cases. Reports: Citizens can submit reports on disease information, suspected infections, or problems in the implementation of COVID-19 prevention and control regulations to the authorities. Tracing: Information about QR code scanning, Medical declaration, Domestic move declaration, Close contact detection, etc. provided by PC-Covid will combine with Fast tracing system to finish tracking those related to a COVID-19 case in a few minutes. Domestic move: When wanting to travel within the country, citizens need to make domestic move declaration. Based on the declaration, the authorities can master citizens' move and health information to serve the prevention and control of the COVID-19 pandemic. Check-in places: Citizens can view details about the places they have been to and performed QR code scanning when entering/leaving. The details include names of the places and relevant times (detailed time of each QR code scan). Risk map: The app allows viewing COVID-19 infection risk maps in real time. PC-Covid's functionality will be continuously updated and adjusted under the direction of the National Steering Committee for COVID-19 Prevention and Control, making it most convenient for citizens and pursuant to the nation's COVID-19 prevention and control strategy in each period. Information on people's health, travel and contact is managed in a centralized, unified way and serves no other purposes than the pandemic prevention and control, ensuring information safety. The upgrading of PC-Covid is done automatically while notifications are displayed to users to make sure they know the changes. ----- Website: www.pccovid.gov.vn Contact: lienhe@pccovid.gov.vn Terms of use: www.pccovid.gov.vn/dieukhoansudung

App Security Score Calculation

Every app is given an ideal score of 100 to begin with.

For every findings with severity **high** we reduce 15 from the score.

For every findings with severity **warning** we reduce 10 from the score.

For every findings with severity **good** we add 5 to the score.

If the calculated score is greater than 100, then the app security score is considered as 100.

And if the calculated score is less than 0, then the app security score is considered as 10.

Risk Calculation

| APP SECURITY SCORE | RISK |
|--------------------|-----------------|
| 0 - 15 | CRITICAL |

| APP SECURITY SCORE | RISK |
|--------------------|--------|
| 16 - 40 | HIGH |
| 41 - 70 | MEDIUM |
| 71 - 100 | LOW |
